

Debug native cloud applications

Project Title	Debug native cloud applications
Project Summary	Test native cloud applications designed for external defense trade users to submit registration and licensing applications to the Directorate of Defense Trade Controls. Work with communications and training team to better equip users with necessary information on the modernized systems.
Country	United States

Project Description

Working with business analysts, test and system engineers, intern will test various external applications that allow defense companies to submit registration and licensing applications through an interactive website. Interns will review instructions, training videos, and web content to provide feedback on the overall ease of use. Intern will work with testing team to test various applications providing test results in clear communication back tot the testing team. Candidate should have attention to detail, ability to work independently, and strong communication skills.

Intern will also work with communications team to write content, training guides, and tool tips for the software.
